

JOB OFFER

Position in the project:	Graduate student
Scientific discipline:	Energy Engineering /Mechanical Engineering and/or similar
Job type (employment contract/stipend):	stipend
Number of job offers:	1
Remuneration/stipend amount/month (*X0 000 PLN of full remuneration cost, i.e. expected net salary at X 000 PLN*):	2 000 PLN
Position starts on:	01.10.2019
Maximum period of contract/stipend agreement:	01.10.2019 – 30.09.2020
Institution:	Division of Boilers and Steam Generators / Institute of Power Engineering and Turbomachinery / Faculty of Energy and Environmental Engineering / Silesian University of Technology
Project leader:	dr hab. inż. Sylwester Kalisz
Project title:	<i>Process optimisation and valorisation of combustion by-products in transition to circular economy (UPS-Plus)</i> <i>Project is carried out within the TEAM-TECH Core Facility programme of the Foundation for Polish Science</i>
Project description:	The main object of the project is the realisation of circular economy ideas by optimising the combustion process in order to obtain combustion by-products likely to valorisation and usable in industry. Optimization of low-quality solid fuels combustion (e.g. biomass or refuse-derived fuel) will be based mostly on upgrading fuel properties with additives, especially connected with slagging, fouling and high-temperature corrosion and on a reduction of harmful compounds (e.g. NO _x , Hg, HCl, HF, NH ₃). The purpose of the optimisation is to produce specific by-products subsequently subjected to thermal and chemical functionalization resulting in obtaining useful materials, e.g. geomats, insulations or sorption medium. Project objectives will be carried through the usage of innovative, multifunctional Core Combustion Facility (CCF) – semi-technical boiler stand allowing to develop research service concerning modification of combustion process in order to receive most useful by-products.
Key responsibilities include:	Master thesis research: “Constructional analysis of additive loading and removal systems of combustion products for a semi-technical grate boiler”. Research within Task 1.4 – Gas and solid emission control. Master thesis research will include following scope: <ol style="list-style-type: none"> 1. Constructional analysis of the transport system for fuel additives in loose form: <ol style="list-style-type: none"> a) Development of a concept for a semi-technical grate boiler; b) Optimization of solutions; c) Preparation of project documentations. 2. Preparation of a modernization project for a semi-technical boiler in the field of flue gas treatment: <ol style="list-style-type: none"> a) Development of the extension concept of exhaust gas channel to achieve the right temperature; b) Preparation of design for mounting the NH₃ sensor;

	<ul style="list-style-type: none"> c) Optimization of solutions; d) Preparation of project documents.
Profile of candidates/requirements:	<ul style="list-style-type: none"> 1. A student status in a field of Mechanical Engineering/Energy Engineering or/and similar. 2. Oral and written language skills in English (min. B2 level). 3. Predispositions for computational type of work. 4. Basic knowledge of boiler technology and flue gas treatment. 5. Familiar with SolidWorks or AutoCAD software.
Required documents:	<ul style="list-style-type: none"> 1. Covering letter including the reason of willing to realise the Engineering or Master thesis within the UPS-Plus Project (max. 1 page). 2. CV including relevant professional experience, students organization activities and knowledge (max. 2 pages). 3. Copy of the Bachelor degree certificate(s) with grades list or certificate of being a student in engineering study with grades list. Translations into English or Polish if the original documents are not issued in one of these languages. 4. Confirmation of good oral and written communication skills in English (min. B2 level).
We offer:	The possibility of realising Engineering or Master research in a dynamic research environment in close cooperation with industries and advanced research centres in the world.
Please submit the following documents to:	ccf@polsl.pl (e-mail subject: CCF – Student application 7)
Application deadline:	12.07.2019
For more details about the position please visit (website/webpage address):	www.ccf.polsl.pl
Euraxess job/stipend offer (in case of PhD and postdoc positions):	

Please include in your offer:
